Sensory Testing Monofilament 5.07/10g filament
Pack of 20 or Pack of 40 Monofilaments

10gm Monofilaments are attached to an easy-to-use paperboard handle. Used to screen for loss of protective sensation (LOPS) and neuropathy. Featuring ADA recommended test sites on back of handle.

M3 Monogripper

Make the paper-handle Monofilament easy to hold and easy to use with our Monogripper. The Monogripper is a handheld plastic tool that firmly clasps a monofilament, allowing for an easier grip and simpler testing. The Monogripper can function as a permanent handle, even though our Monofilaments are disposable.

Monofilaments Attached to Individual Instruction Cards - 25 per pack

ADA recommended test sites on the back of the instruction cards include instructions on appropriate use of the monofilament. Card is approximately business card size (3.5” x 2”). A Monofilament Handle is adhered to the inside of the instruction card. 25 per pack.

*Please select front of instruction card and monofilament design before submitting order.

Instructions For The Single-Use Monofilament
1. Hold the filament by the paper handle.
2. Use a smooth motion to touch the filament to the test site for 1-2 seconds. Touch alongside rather than directly on a sore or callus or ulcer. Push to feel the filament bend.
3. Place a check in the circle if you feel the filament at the site and a cross if you cannot feel the filament.

Monofilaments are a screening device used to assess level of protective sensation.

Sensory Testing Instructions
1. Hold the filament by the paper handle.
2. Use a smooth motion to touch the filament to the skin on your foot for 1-2 seconds. Touch alongside of, and NOT directly on, an ulcer, callus, or scar. Push to make the filament bend.
3. Touch the filament in all sites the drawing on back.
4. Place a check in the circle if you feel the filament at that site and a cross if you do not feel the filament.
5. Monofilaments should be used with ongoing physician care.
